## EFD

Flowgrill can provide an advisory role in the process of a new louver-design. By using EFD.pro the airflow can be simulated.

## Advantages of EFD:

- Saving costs, prototypes are not necessary
- Time reduction, quicker results.
- Use of parametric CAD data
- Detection of laminar and turbulent
- Simulation of various designs
- Results will be reported in text and images
- Pressure measurements
- Indication about the resonance produced by the louver.
